BICT 1101

Lecture 2: Word Processing (Contd..)

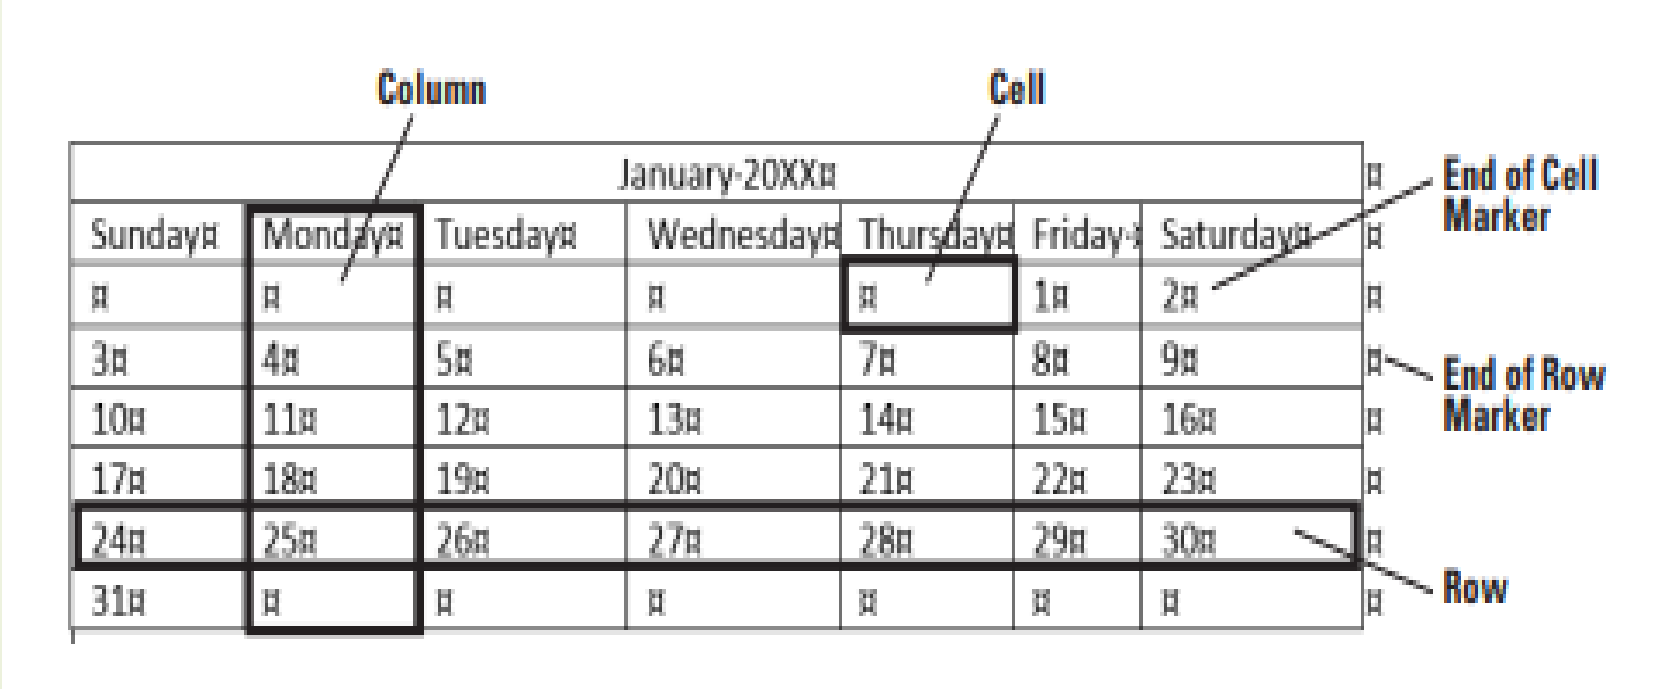
TABLES (CREATING A TABLE)

- A table, is an arrangement of data made up of **horizontal rows** and **vertical columns**.
- **Cells** are the rectangles that are formed when rows and columns intersect.
- Tables are ideal for organizing any kind information in an orderly manner.
  - Calendars, invoices, and contact lists are all some of the examples of how tables are used every day.

TABLES (CREATING A TABLE)

- You can create a Table to enhance the presentation of data, to organize information.
- Word provides several options for creating tables, including:
  - the **dragging method**
  - the **Insert Table dialog box**
  - the **table drawing tools**
  - the **Quick Table method**

TABLE CREATED IN WORD



INSERTING TABLE

- To insert a table into your document, place the insertion point where you want to insert the table.
- Then, click the **INSERT** tab on the ribbon and click the drop-down menu on the **TABLES** command group select **INSERT TABLE**.
- Use the mouse to select the desired number of columns and rows in the dialogue box.
- Word will create a table that fills the area inside the margins with the width of the columns adjusting automatically according to the amount of space available.

CREATING A TABLE BY DRAGGING

EXERCISE: INSERTING A TABLE (DRAGGING)

- Open a blank document.
- Then, click the **INSERT** tab on the ribbon.
- Click the drop-down menu on the **TABLES** command group.
- Use the mouse to shade 4 columns and 5 rows, and then click the left mouse button to insert the table.

NOTE: Practice to Draw a Table using the "Draw Table" option at your own free time.

TABLE TOOLS TAB

- After inserting a table, Word displays **Table Tools Tab (Design Tab)** in the Ribbon.
- **Table Tools Tab** appears once the table is in place and selected.
- Use the **Table tab** to adjust the table and enhance it.
- For example you can change the width and height of a row or column, alter the style of the table or delete grid lines.

TABLE TOOLS TAB

- When working with tables in word, a **contextual Table Tools Ribbon** is displayed that is only visible when a table is in use.
- The **Table Tools Ribbon** has two tabs: the **Design tab** and the **Layout tab**.
- The **Layout tab**, includes commands for changing the entire format of a table as well as commands for changing the appearance of individual table components, such as **cells**, **columns**, **rows**, and **formulas**.

INSERT A ROW OR COLUMN

- You can insert additional row or column to a table easily. Row or Column insertion can be done by:
  - Right clicking in a **row**
  - From the menu select **Insert** and select **Insert rows/columns** either **above** or **below** the selected row or **to the left/to the right** of the selected column.
- A row/column can be inserted through the **Table Tool Layout** Tab, then **rows and columns command** group, select the appropriate insertion method; in this case, click **INSERT BELOW**.
  - Notice a new row has been added beneath the current row.

INSERT A ROW OR COLUMN

- You can add multiple rows or columns at once by selecting the desired number of rows or columns to add, and then clicking the desired insertion method.
- **Note:** The simplest way to add a new row at the bottom of the table is to move to the last column of the last row and press the [TAB] key.

DELETE TABLE, COLUMN OR ROW

- To delete the table:
  - Click the **four headed arrow (move handle)** on the top left of the table to select the table and get the options to delete the table, delete rows, delete columns.
  - Right click the **table** and select **Delete table**
- **OR**
  - Place your cursor in the last column.
  - Then, from the **LAYOUT tab**, click the **DELETE** option, , from the **ROWS & COLUMNS** command group.
  - Select **DELETE COLUMNS**.

MOVING AROUND A TABLE

- Each block in a table is called a Cell.
- You can move around a table by using the **left**, **right**, **up**, and **down arrow** keys.
- To move to a specific cell, use your mouse pointer to move to the specified cell.
- Or, you can use the [TAB] key to move from cell to cell, from left to right.
- You can hold down the [SHIFT] key and press the [TAB] key simultaneously to move from cell to cell, from right to left.

ENTERING TEXT INTO A TABLE

- To enter text into a table, simply type the text inside the desired cell. Press the [TAB] key to move to the next cell.

ENTERING TEXT INTO A TABLE

- **EXERCISE: ENTERING TEXT INTO A TABLE**
  - With the cursor in the first cell, type **PACKAGE TYPE**. Then, press the [TAB] key.
  - Type **INTEREST RATE (2020)** in the first cell in the second column. Then, press the [TAB] key.
  - Continue until you have entered all of the text shown below.

PACKAGE TYPE	INTEREST RATE (2020)	INTEREST RATE (2021)	RECOMMENDED
Conventional	7.0%	7.5%	No
Combo	7.65%	7.12%	Yes
Jumbo	7.85%	7.88%	No
VIP	7.25%	7.5%	Yes

ADJUSTING COLUMN WIDTH

Using AutoFit

- When a table is first created, it evenly distributes the space for each column.
- The AutoFit command enables you to adjust column widths to fit the size of the table's contents, the size of the window, or a fixed column width. You can AutoFit a column using the mouse or the Ribbon.
- You can use commands in the **Cell Size** group on the **Table Tools - Layout tab** and then select the AutoFit command.

ADJUSTING COLUMN WIDTH

- To resize column widths to best fit the data is done by first clicking inside the table.
- Then, from the **LAYOUT tab**, click the **AUTOFIT** command, from the **CELL SIZE** command group, a drop-down menu is opened. On the drop-down menu, click **AutoFit Contents**. Each column width changes to fit the data in the column.
- An alternative method is to use the Width Indicator. To use this method, place your cursor on the line that separates the two columns. This causes the width indicator to appear.
- Click and drag with the mouse to adjust the column width either larger or smaller.

RESIZING A ROW OR COLUMN

- To resize a column or row we can use the mouse or the commands on the Ribbon.
- You can use commands in the Cell Size group on the Table Tools - Layout tab to adjust height and width or use the ruler to adjust the column width.
- In addition, the Table Properties dialog box enables you to set the measurements at a precise height for rows or an ideal width for columns, cells, and tables.

RESIZING A ROW OR COLUMN

- Click in the first column and position the mouse pointer over the horizontal ruler on the first column marker.
- The pointer changes to a double-headed arrow along with the ScreenTip Move Table Column.
- Click and drag the column marker to the right, just until the contents in the first column fit in a single line.
- On the **Table Tools - Layout tab**, in the Cell Size group, the width automatically gets adjusted.
- Just as columns can be adjusted manually, so can rows—you use the vertical ruler to adjust the row markers.

RESIZING A ROW OR COLUMN

- Position the insertion point in any column of a table.
- On the **Table Tools - Layout tab**, in the **Table group**, click the **Select button**, and choose Select **Column** from the drop-down menu.
- On the **Table Tools - Layout tab**, in the **Cell Size group**, click the up arrow in the Width box until all your text fits in one row and you will note that the column width changes.

RESIZING A ROW OR COLUMN

- Place the insertion point anywhere in the first row.
- In the **Table group**, click the **Select button** again, and then click **Select** Row from the drop-down menu. The first row is selected.
- On the **Table Tools - Layout tab**, in the **Cell Size group**, click the dialog box launcher. The Table Properties dialog box appears.
- Click the **Row** tab in the dialog box.
- Select the **Specify height** checkbox. In the Height box, click the up arrow until the box reads 0.5".

RESIZING A ROW OR COLUMN

- Click the Next Row button and notice that the changes are applied only to the first row.
- By clicking the Next Row button, the selection moves down one row.
- Click OK. In the **Cell Size group**, notice that the height for row 1 is at 0.5”. You can also adjust the height of a row individually or by selection.
- Click in any cell to remove the selection.

CREATING A HEADER ROW

- Position the insertion point anywhere inside the table.
- On the **Table Tools - Layout tab**, in the **Table group**, click the **Select button**, and then click **Select Table**.
- On the **Home tab**, change the font size for the entire table you created until it extends to the next page.
- By changing the font size in the table, the data extends to the next page.
- Place the insertion point on the first row of the table.

CREATING A HEADER ROW

- On the **Table Tools - Layout tab**, in the **Rows & Columns group**, click **Insert Above**. (**Only if you don't have a heading row already typed**)
- A new blank row is inserted.
- On the **Table Tools - Design tab**, in the **Table Style Options group**, select the **Header Row checkbox** to apply a distinctive format to the header row.
- Type headings in the cells of the table's first row.

CREATING A HEADER ROW

- On the **Table group** of the **Table Tools - Layout tab**, click the **Select button** and **Select Row**.
- On the **Table Tools - Layout tab**, in the **Data group**, click the **Repeat Header Rows button**. Scroll down and view the headings on the second page.
- Click anywhere in the table to deselect.
- Position the insertion point anywhere inside the table. On the **Table Tools - Layout tab**, in the **Table group**, click the **Select button**, and then click **Select Table.**
- On the **Home tab**, change the font size to as long as the content extends to a new page, the headings will appear, regardless of the font size.
- **Take Note** Repeating rows are only visible in Print Layout view, Backstage view, or on a printed document

MOVING TABLE TO NEW PAGE/DOCUMENT

- You can move a table to a new page or a new document by clicking the Move handle to select the table and then using the Cut and Paste commands.
- You can also use the Copy command to leave a copy of the table in the original location.

MERGING CELLS

- If you want to create a table heading which will span several columns, you can use the **Merge Cells feature** to combine the adjacent cells into a single cell.
- To merge cells, **Select the cells** you want to merge then, **right-click** the mouse button on the selected cells, and choose **MERGE CELLS**. Or
- **Select the cells** you want to merge then go the **Table Tools - Layout tab**, and select **Merge Cells** in the **Merge group**.

FORMATTING A TABLE

- Once you have inserted a table into a document, you can apply a preformatted style using the **Table Styles gallery**.
- These styles add a professional appearance to the tables in your documents.
- In the **Table Tools - Design tab**, in the **Borders group**, you can manually format **a table's borders**.
- The Borders group enables you to draw and apply styles to the table.

FORMATTING A TABLE

Applying a Style to a Table

- With **Table Styles**, it is easy to quickly change a table's formatting. You can apply styles to tables by positioning the insertion point in a table and selecting **a style** from the **Table Styles gallery**.
- You can preview the style before applying it and change the style as many times as needed.
- You can modify an existing Table Style or create a New Table Style and add it to the gallery, and then modify or delete it, as appropriate.

FORMATTING A TABLE

Apply a Style to a Table

- Position the insertion point anywhere in the table.
- On the **Table Tools - Design tab**, in the **Table Styles group**, click the **More button** to view a gallery of Table Styles. There are three options available: **Plain Tables, Grid Tables, and List Tables.**
- Scroll down to the third row under the **Grid Tables** and select the **Grid Table 3 Accent 3 style**.

FORMATTING A TABLE

Changes to Table Styles

- You can apply changes to a table style in an existing document or as a new document based on a template.
- You can apply the changes to the whole table or specifically to one of the Table Styles options such as in the banded rows or columns.
- You can apply formatting changes to the **table properties, borders/shading, banding, font, paragraphs, tabs, and text effects.**

FORMATTING A TABLE

Modify the Table Styles

- Make sure that the insertion point is still in the table. If you click outside the table, the Design and Layout tabs will not be available.
- On the **Table Tools - Design tab**, in the **Table Styles group**, click the **More button**.
- Click **Modify Table Style** to open **the Modify Style dialog box**. Notice that in the Name box, Grid Table 3 – Accent 3 is applied from a previous exercise.
- In the **Apply formatting to box**, click the **drop-down arrow** and select First column. This only applies the changes to the first column.
- Click the **Format button** in the **Modify Styles dialog box** and select **Font** to open the **Font dialog box**.
  - The Format button displays the menu of available options. Each menu opens its own dialog box.

FORMATTING A TABLE

- With the **Font dialog box** open, type **Garamond** in the font box. Notice that when you type the first three characters, Word displays available fonts. Select Garamond.
- In the **Font style group**, select **Bold Italic, 12 pt** for Size, and **Olive Green, Accent 3**, **Darker 50%** for Font color.
- Click **OK** to close the Font dialog box. Changing the attributes affects only the first column. Click **OK** to close the Modify Style dialog box. Nothing happens to the table.
- In the **Table Style Options group**, select the **First Column checkbox**. The style changes you made appear in the table.

INSERTING A QUICK TABLE

- Quick Tables are built-in preformatted tables, such as calendars and tabular lists, which you can insert and use in your documents.
- Word 2016 provides a variety of Quick Tables that you can insert into your documents. You can edit the Quick Table calendar to reflect the current month and year.

Insert a Quick Table Calendar into a document

- On the **Insert tab**, in the **Tables group**, click the **Table button** to open the **Insert Table menu.**
- On the menu, just below the rows and columns, select **Quick Tables** from the menu. A gallery of built-in Quick Tables appears
- Select **Calendar 2.** You can edit the data in the calendar to display the current month and year.

HEADER AND FOOTER

- A header appears at the top of a document page, and a footer appears at the bottom. **The Header & Footer group** is found on the **Insert tab** and contains commands for inserting **built-in headers, footers, and page numbers** into a Word document.
- The Page Number button in the Header & Footer group has commands for **inserting page numbers in the header, the footer, or the side margin of a page** using a built-in gallery.
- To add a header or footer to a document:
  - Choose the **Insert** tab and select **Header** or **Footer** from the **Header and Footer group.**
  - Select either **Header** or **Footer** for choices for a footer and page number

HEADER AND FOOTER

- Select one of the **style options**
- After selecting **Header** option, note the addition on the ribbon of **the Header/Footer Tools Design Tab**.
- Type the wanted **text** in the header or footer box by highlighting [**Type Text**]. The Tab key moves the cursor from the left side to the middle of the page, and then to the right side.
- Choose the appropriate spot for inserting the **name of the document**, **the date**, or **page number**. You can also select options from the groups such **as Page number, Date and Time, Options or Position**.
- Click the **close Header and Footer** button when you finish.

REFERENCES TAB

- Commands on the **References tab** are used to create **a table of contents**, **footnotes and endnotes**, **citations and a bibliography**, **captions**, **an index**, and **a table of authorities**.

TABLE OF CONTENTS GROUP ON THE RIBBON

- When working with your research paper, adding a table of contents can make it easy for the reader to locate a section of your paper quickly.
- The table of contents makes it easy to jump from one location in your document to another.
- Word automatically creates links for you, and, should you decide to present the paper online, the links will be in your document

CREATING A TABLE OF CONTENTS

- A **table of contents** is usually found at the beginning of a long document to help readers quickly locate topics of interest.
- A **table of contents** (TOC) is an ordered list of the headings in a document, along with the page numbers on which the headings are found. The table of contents follows the title page.
- Word makes inserting a table of contents easy by providing a built-in gallery of styles on the Table of Contents menu. You can use one of the styles from the built-in gallery or manually format a table of contents.
- Your document must contain heading styles for Word to automatically build a Table of Contents. Word will construct your Table of Contents based on any heading style in the document.
- For example, if you use **Heading 1**, **Heading 2**, and **Heading 3 styles** in your document and then generate a table of contents, Word automatically knows which heading style you are using.

CREATING A TABLE OF CONTENTS

NOTE: Before creating the Table of Contents in this class following the below steps you need to have a document which has different heading styles (up to 4 styles) from the Home tab, Styles group.

- Position the insertion point at the beginning of the document. On the **Layout tab**, in the **Page Setup group**, click **Breaks** and, in the **Section Breaks section**, select **Next Page**. Then, move the insertion point to the top of the first page.
- By inserting a section break, you separate the Table of Contents from the rest of the document, because you may need to insert page numbers differently.
- Press Enter twice to create a blank line above the section break, and place the insertion point on the top line.
- On the **References tab,** in the **Table of Contents group**, click the **Table of Contents button**. A menu appears, containing a gallery of built-in styles.

CREATING A TABLE OF CONTENTS

- Select the **Automatic Table 2 style**. The table of contents is inserted in the document. When you click inside the table of contents, it is shaded in gray. Each entry is linked to a heading in the document and has a ScreenTip instructing you to **Ctrl+Click** to advance to that heading.
- This particular Table of Contents style contains headings and right tab settings with dot leaders. The page numbers are automatically inserted for each heading. When you select the table, the Table of Contents tab appears at the top, enabling you to select the table, change the format, and update its contents.
- Press **Ctrl** and click **the mouse button** to follow the link to a particular heading. Word jumps to that section of the document. Press **Ctrl+Home** to go to the beginning of the document.

FORMATTING A TABLE OF CONTENTS

- The Table of Contents dialog box has other formatting options, including whether to **show page numbers** or **right-align page numbers**. You can also specify tab leaders, which are the symbols that appear between the table of contents topic and the corresponding page number.

STEPS

- Select the table of contents you created, and in the **Table of Contents group**, click the **Table of Contents button**.
- Select **Custom Table of Contents** from the menu. The Table of Contents dialog box appears.
  - **The Print Preview box** shows the style used to create the printed table of contents.

FORMATTING A TABLE OF CONTENTS

- **The Web Preview box** displays the same content using hyperlinks instead of page numbers. Using the controls in the Table of Contents dialog box, you can specify whether to show page numbers and whether to right-align those page numbers. Tab leaders are symbols that serve as a visual guide connecting the headings to the page numbers. These can appear as **periods, hyphens, lines, or nothing at all**. You can also change the format of the Table of Contents to display multiple heading levels
- In the **General section**, from **the Formats drop-down list,** select **the Simple format**. You can see the format's differences in the preview areas.
- Click **the Options button**. The Table of Contents Options dialog box appears.
- In **the Build table of contents from** section, scroll down in the TOC level list until you come to the styles and their levels marked for inclusion in the table of contents.
- Add a TOC level 4 by typing 4 in the box by Heading 4. A check mark appears by the heading.

FORMATTING A TABLE OF CONTENTS

- Click **OK** to close the **Table of Contents Options dialog box**, and then click **OK** to close the Table of Contents dialog box.
- When a **message box appears**, prompting you to replace the table of contents, click **OK**. The table of contents is updated and now contains the page number next to the heading with no tab leader. If you had four heading levels in your document, you would see Heading 4 in the Styles group of the Home tab.
- OPEN **the Custom Table of Contents** and **the Table of Contents Options dialog boxes** again and remove the Heading 4 you created earlier.
- Click **OK** to close the Table of Contents Options dialog box.
- In the **Table of Contents dialog box**, in the **Format drop-down list**, select **Distinctive**. The table of contents now appears with a line as a tab leader followed by the page number.
- Click **OK** to close the dialog box and then click **Yes** to replace the table of contents.

MAIL MERGE

- **Mail Merge** is a useful tool that allows you to create multiple letters, labels, envelopes, name tags, emails, and more.
- By using information stored in a list, database, or spreadsheet, you can create personalized documents by merging the information with a form letter, mailing labels, or envelopes.
- You can perform a mail merge by using the **Mail Merge Wizard**, or by using the commands on the **Mailings tab**.

MAIL MERGE

Using the Mail Merge Wizard

- The following example starts with an existing letter and shows the steps for merging the letter with names and addresses in an existing Excel spreadsheet.
  - Click the **Mailings tab.**
  - Click **Start Mail Merge**.
  - In the **Start Mail Merge drop-down**, click **Step-by-Step Mail Merge Wizard**.
  - In the **Mail Merge pane** under **Select document type**, click **Letters**.

MAIL MERGE

- Click **Next: Starting document**.
- In the **Mail Merge pane** under Select **recipients**, click **Use an existing list**.
- Click **Browse**.
- In the **Select Data Source dialog box**, navigate to and select **the Excel spreadsheet** that contains the contact information you want to use. (**Note: An Access database can also be selected as the data source.)**
- Click the **Open button**.
- In the **Select Table dialog box**, select the sheet that contains the contact information you want to use.
- Click the **OK** button.

MAIL MERGE

- In the **Mail Merge Recipients dialog box,** you can use the following options to edit the information that is used during the mail merge.
  - **Add/Remove Recipients** - Add or remove recipients from the mail merge.
  - **Sort** - Sort your records using specific parameters.
  - **Filter** - Filter your records using specific parameters.
  - **Find duplicates** - Find duplicate records and remove from the mail merge.
  - **Find recipient** - Find a recipient in your records.
- Click the **OK** button.
- In the Mail Merge pane, click **Next: Write your letter**

MAIL MERGE

- In the **Mail Merge pane** under **Write your letter**, you can use the following options to add the recipient information to your letter.
  - **Address block** - Add address information to your letter.
  - **Greeting line** - Add a personalized greeting to your letter.
  - **Electronic postage** - Add electronic postage to your letter.
  - **More items** - Enter specific fields into your letter, one field at a time

MAIL MERGE

- Click Address block.
  - **Insert recipient's name in this format** - Select a format from the drop-down list for how you want the recipient's name to appear.
  - **Insert company name, Insert postal address, Format the address according to the destination country/region** - If available you can insert this information.
  - **Preview** - Preview how your address will look in your letter. Use the arrow buttons to navigate through your list.
  - Click the **OK** button.
- Click Greeting Line.
  - a) **Greeting line format** - Create the greeting line for your letter (**See Figure 35).**
  - b) **Greeting line for invalid recipient names** - Set a generic greeting that will display when Word cannot find a name for an entry (**See Figure 35**).
  - c) **Preview** - See how your selections will look in the final mail merge. Use the arrows to navigate between records (**See Figure 35**).
  - d) Click the **OK** button (**See Figure 35).**

MAIL MERGE (GREETING LINE)

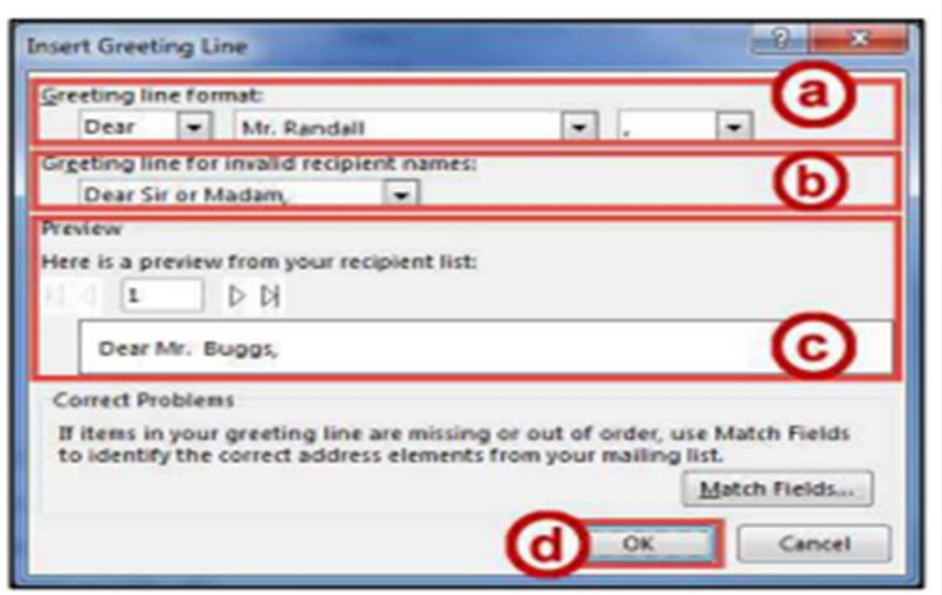


Figure 35 Inert Greeting Line

MAIL MERGE

- Click More items.
  - **Fields** - Insert specific fields into your letter, one field at a time.
  - **Insert** - Insert the selected field.
  - Click the **Close** button.
- In the **Mail Merge pane**, click **Next: Preview your letters**.
- In the **Mail Merge pane** under **Preview your letters**, you can **preview** all letters before completing your mail merge.
- Click Next: **Complete the merge**.

MAIL MERGE

- In the **Mail Merge pane** under **Merge**, click **Print.**
- In the **Merge to Printer dialog box**, select your option to ***Print Records***.
- Click the **OK** button.
- The **Print window** will open. Adjust your settings for your printer and print your documents.
