END USER COMPUTING

1. Differentiate the following

   i. **Command** and **Dialog Box**
      - **Commands** are options/instructions found in groups of a ribbon that affect changes on active window.
      - **Dialog box** is a small window that a program pops open to request input from a user.

   ii. **Start Menu** and **Task Bar**
      - **Start Menu** is the starting point of the system task.
      - **Task Bar** allows you to locate and launch program through start.

   iii. **Mouse** and **Touch Pad**
      - **Mouse** has optical sensor, peripheral/external and portable.
      - **Touch Pad** have touch sensor, built in and flat and small rectangular.

   iv. **Desktop** and **Desktop Computer**
      - **Desktop** is the main screen area that you see after you turn on your computer and log on to windows.
      - **Desktop Computer** is a complete set of a computer.

2. State and describe three **Inputs** and two **Output Devices** for computer.

   i. Inputs
   - **Mouse** –used for controlling the movement of a cursor or pointer on the computer screen.
   - **Keyboard** – used for typing in texts or figures.
   - **Scanners** – used for digitize the information and present it on the computer screen.
   - **Micro phone** – used to convert sound waves into electrical waves or input audio into a computer.

   Output

   - **Monitor** – Displays the commands from the Central Processing Unit.
   - **Printer** – Print out documents.
   - **Speaker** – Producing sounds.

3. Why are we advised to **Power Off** our Computer using **Operating Systems**?

- To allow the system to save the processed work and it reminds if there are other works which are not saved.

4. Describe **Mail Merge Feature** in Microsoft word

- **Mail Merge** consists of combining mail and letters and pre-addressed envelopes or mailing labels for mass mailings from a form letter. This feature is usually employed in a word processing document which contains fixed text and variables. It is a powerful tool for writing a personalized letter or e-mail to many people at the same time. It imports data from another source such as a spread sheet and then uses that to replace placeholders throughout the message with the relevant information for each individual that is being messaged.

5. Discuss the importance of **Internet to the Community**

- Allowing communication between lots of people without restrictions.
- Distance education programs make it easier for students from a variety of backgrounds to attend classes remotely, cutting down the need for travel and reducing the resources required for education.
- Made access to information and communication far easier.
- Government organizations use the Internet to improve organization and communication.

6. Differentiate the following

a. **Conventional** and **Web Based Email** systems

- **Conventional** allows access to email from a single computer while **Web Based Email** allows access from any computer with an internet connection and supported web browser.

b. **Internet** and **Web**

- **Internet** is the interconnection of computers while **Web** is a collection of web pages found on network of computers.

c. **Browser** and **Search Engine**

- **Browser** is use to retrieve information from internet while **Search Engine** used for crawling, data mining, indexing and query processing.

7. Differentiate the following computer terms;

a. **Hardware** – physical components/parts of the computer

Software – are programs that control or maintain operation of the computer.

b. **Search Box** and **Dialog Box**

Search box – opened to search for files in the computer.

Dialog box – opened to see options related to that group.

c. **Folder** and **File**

Folder – It's where files are contained.

File – are programs that need other programs to be opened or run

d. **Internet** and **World Wide Web**

Internet – is interconnection of computer networks all over the world. OR

- Is a huge network of computers all connected together.

World Wide Web - is a collection of electronic documents that are linked together like a spider web.

e. **ROM** and **RAM**

- **ROM**
  - Permanent storage of files/information
  - Stores instructions and data that can be read but cannot be updated.
- **RAM**
  - Temporary storage of files/information

8. Describe the three main sections of the **Task Bar.**

i. **Notification area** – where you customise date and time, volume of sound and hide other icons.

ii. **Search area** – Searching for files and programs
iii. **Start Button** – Where start menu is obtained upon clicking it.
iv. **Middle area/Quick Access Launcher Area** – Where programs are pinned for easy access.

9. Mention and explain four things that are needed to **Connect to the Internet.**

i. **Computer Device** – contains program that are needed for internet connection.
ii. **Modem/Dongle/Router/Ethernet Cables** – That receives signal from both the user and the service provide.
iii. **Internet Service Provider** - That provide internet services to the internet users.
iv. **Soft Wares** - That links the Devices and users to interact.

10. Discuss any four **Netiquette** that you know when using online communication

i. Use of respectful language
ii. Check before responding or posting
iii. Share with discretion
iv. Respect others privacy
v. Do not exclude others opinion
vi. Use short paragraphs

11. What is the difference between the following?

i. **Delete** and **Backspace** – Delete, from insertion point you delete characters to the right while backspace you delete to the left.
ii. **Save** and **Save As** Command – Save – You do to changes done to already existing document/file while Save As, you use to save document/file for the first time.
iii. **Cut** and **Copy** Command – Cut, it a complete moving of the file to where you want while copy you have two files or duplicate the files.

12. Explain how the following can be done in Microsoft Word 2010

i. **Adding a Table with three columns and four Rows** – Click on Insert Tab, on the table group, click table command, use dragging method.

ii. **How to insert header and a footer** – Click insert tab, on the Header and Footer, click header or footer command, from the drop down menu select header or footer desired.

iii. **Insert a Table of Content** – Click Reference Tab, on the Table of contents group, click on the Table of Content command, on the menu select the desired table of content.

iv. **Moving a File from Document library to Desktop** – Click the file and hold down the left button and drag to the Desktop from Document Library or you select the file, right click it and select cut, go to the desktop, right click on the desktop and select paste to paste it on the desktop.

13. What are the meanings of the following items used in Microsoft Word?

i. **Ctrl+A** – Select All
ii. **F12** – Save as
iii. **Ctrl+=** - Subsript
iv. **Ctrl+Shift+Plus Button** - Superscript
v. **Ctrl+ V** – Paste

14. Mention two uses of **Name Box** in Microsoft Excel

i. Displays the name of the active cell
ii. Used to go to any address you type into it
iii. Displays the name of the cell, range or objects selected if this has been named.

15. Describe three ways you can **Edit Data** in a cell

i. Double click the cell to come to edit mode.
ii. Select the cell and edit it in the formula bar.
iii. Highlight the cell and start typing for editing.

16. Mention three **Types of Cell References** that can be used in Micro Soft Excel

i. **Absolute Cell Reference -** remain constant no matter where they are copied
ii. **Relative Cell Reference** – change when a formula is copied to another cell
iii. **Mixed Cell Reference** – Only refer a Column or Row of the cell.
iv. **Cell Reference** – Refers to a cell or a range of cells on a worksheet.

17. Describe any common **Errors** that can be encountered in Micro Soft Excel

i. **# NUM!** – there is a problem with a value. Value is too large. Arguments in wrong order (end date 2nd)
ii. **# VALUE!** – Argument is wrong type. Incorrect value type. Array formula without array syntax.
iii. **# REF!** – Invalid or missing reference.
iv. **# NULL! -** Intersection of two anges that don't intersect. Typo in range separator.
v. **#DIV/0!** – Divided by zero/ blank, criteria selects.
vi. **#NAME?** – Mispeslled function, missing name i.e. =SU(…) instead of =SUM(….)
vii. **#N/A!** – Data missing or unavailable. One or more value is not available. Value not found in table.
viii. ########### - Value cannot fit in cell.

18. What is the use of **Navigation Pane** in Microsoft Access?

i. Renaming
ii. Deleting
iii. Open
iv. Searching
v. Viewing

19. Describe four **Objects** that can be created in Micro Soft Access

i. Tables
ii. Forms
iii. Reports
iv. Queries
v. Modules
vi. Macros

20. Mention any four types of **Data** that are available in Microsoft Access

i. Texts
ii. Numbers
iii. Date and Time

iv. Currency

21. Describe two **Views** that can be used when you are working with Table in Micro Soft Access

i. **Datasheet View** - view has built-in filtering and sorting options available when you want to search or filter for specific data. The Datasheet view is also useful for quickly viewing the details of many records, adding new records, and deleting records from a table. You can also download records from a Datasheet view in an Access app into Excel.

ii. **Design View** – displays our table as a grid – like a worksheet in Excel. Another way of looking at the table when setting it up. It can make it a bit easier to set up the fields.

22. Differentiate the **Primary** and **Secondary Keys**

i. **Primary Key** uniquely identifies record

ii. **Secondary Key** is an additional key or alternative which can be used to the primary key to locate specific data.

23. What is the difference between **Fields** and **Records** in Database System?

i. **Fields** is column contains data about one aspect of table subject in each or a piece of information related to a single person or thing.

ii. **Records** are collection of information about specific entity.

iii. **Table** is a collection of related information that is organised in columns that describe an entity.

24. What do you understand by the term **Presentation**?

- **Presentation** is to Powerpoint what a document is to word or a worksheet is to excel.

25. Describe the main areas of the **Normal View** in Microsoft Powerpoint.

i. **Navigation Pane** – Used for searching, customing and editing items.

ii. **Notes pane** – Where you write notes for the presentation.

iii. **Placeholders** – Where you type your presentation. Also have icons/thumbnails necessary for presentation.

iv. **Slide Pane** – Contains current slide in your presentation.

26. Explain the use of **Transitions** and **Animations** in Microsoft Powerpoints.

- Used to attract the attention of the audience.
- Used to improve the presentation.

27. What is the use of **Slide Master View** in Microsoft Powerpoint?

- To edit all slide at once.

28. A part from **Slide Master View**, mention other views used to **Edit Slides** in Microsoft Powerpoint.

- **Hand-out Master View**
- **Notes Master View**

29. Mention **Views** under Microsoft Powerpoint.

i. Handout Slide Master View
ii. Normal View
iii. Outline View
iv. Slide Sorter View
v. Notes Page View
vi. Slide Show View
vii. Presentor View

30. What do you understand by **font**? Mention any two types of **font**?

- A **font** is a collection of characters with a similar design. Or is a printable or displayable text characters in specific style.
- Types of Font;
  i. **Theme Fonts** – Change the font face. (**Ctrl+Shift+F**)
  ii. **Font Size** – Change the font size. (**Ctrl+Shift+F**)

31. List the **four** paragraph alignment options in Microsoft Word 2010?

i. **Align Text Left** (**Ctrl+L**) – Align text to the left.
ii. **Center** (**Ctrl+E**) – Center text.
iii. **Align Text Right** (**Ctrl+R**) – Align text to the right.

iv. **Justify (Ctrl+J)** – Align text to both the Left and Right margins, adding extra space between words as necessary.
This creates a clean look along the left and right side of the page.

32. Briefly describe the **four** basic mouse actions.

i. **Single click** – used to select files, folders or icon
ii. **Double click** – used to open folders all file program
iii. **Right click** – used to get option tools of an active window
iv. **Drag and Drop** – use to transfer items.

33. Explain any **three** basic elements of a window.

i. **Title bar** – shows the name of the document and the application working on
ii. **Title Button** – For manipulating the window, are located on the upper right corner of the window's title bar. (The minimize, maximize and close buttons. They are called control buttons).
iii. **Menu bar** – Provides a list of menus, each offering options for modifying document.
iv. **Toolbar** – Displays buttons which provide shortcuts for doing tasks within the application
v. **Status bar** – Displays where you are in your document i.e. page number, line number you are editing, language you are using.
vi. **Scroll bar/Slider** – allow you to move up and down and along your document.

34. **GUI** is an acronym. What does it stand for?

- **Graphical User Interface** - is a system of interactive visual components for computer software. A GUI displays objects that convey information, and represent actions that can be taken by the user. The objects change color, size, or visibility when the user interacts with them.

35. Explain how the following can be done in the Microsoft 2010;

i. Add a table with three columns and four rows
- Click Insert Tab, the in Tables group click Table then drag against three columns and four rows, the click to insert a table.

ii. Resize a clipart after realizing it is too big

- Click once on the clipart to select, and then move the mouse inward whilst press down and hold the left button using the resize handle from any corner of the clipart to reduce the size.

iii. **Copy file from one location to another**

- Right click on a file and from pop up menu, choose copy (Ctrl+C), right click the location you want it to be, from pop up menu, choose Paste (Ctrl+V).

iv. **Moving a file**

- Right click on a file and from pop up menu, choose Cut (Ctrl+X), right click the location you want it to be, from pop up menu, choose Paste (Ctrl+V).

36. Discuss the **four** basic Computer Operations

- **Input** – typing in, copying in files from other devices, downloading e.t.c.
- **Output** – printing out documents, sound from PC's speakers, Powerpoint Presentation beaming
- **Storage** – All information and data in the Computer's hard disc drives.
- **Processing** – Computer can change form of the file.
- **Controlling** – Used to operate other devices or machines i.e. aircrafts.

37. Define **Data** and **Information**

- **Data**
  - Is an individual unit that contains raw materials which do not carry any specific meaning.
  - Data is unorganised and unrefined facts
  - Data doesn't depend on information.
  - It is measured in bits and bytes.
  - Raw data alone is insufficient for decision making
  - An example of data is a student's test score
- **Information**
  - Is a group of data that collectively carries a logical meaning.
  - Information comprises processed, organised data presented in a meaningful context.
  - Information depends on data.

- Information is measured in meaningful units like time, quantity, etc.
- Information is sufficient for decision making.
- The average score of a class is the information derived from the given data.

38. What are the short cut keyboard keys for performing each of the following?

i. Decrease font size = **Ctrl+Shift+<**
ii. Insert a Superscript = **Ctrl**+**Shift**+**Plus button**
iii. Center alignment = **Ctrl**+**E**
iv. Underline your text = **Ctrl**+**U**
v. Paste your text = **Ctrl**+**V**
vi. Creat a new word document = **Ctrl**+**N**
vii. Go to the first line of your word document = **Shift**+**Home**

39. Tendai wanted to find the highest number of a range of the cells from B1 to B10. Write

An Excel formula that he can use to achieve this.

- **Formula;**
  - **=MAX(B1:B10)**

40. Given the following data and formula: H1 = 1, H2 = 2, H3 = 3, H4 = 4, H5 = 5, H6 = 6.

((H5/H3)*H2+H1. Write this formula correctly and provide its output.

- **Formula;**
  - **=((H5/H3)*H2+H1)**
- **Output;**
  - **4.333333**

41. Explain the difference between system software and application software.

- **System Software;**
  - System Software is the type of software which is the interface between application software and system.
  - In general System software is developed in low level language which is more compatible with the system hardware in order to interact with.
  - System software is used for operating computer hardware.

- System software is installed on the computer when operating system is installed.
- As mentioned in above points system software are specific to system hardware so less or no user interaction available in case of system software.
- System software can run independently. It provides platform for running application software.
- Some examples of system software's are compiler, assembler, debugger, driver, etc.

- **Application Software**
  - Application Software is the type of software which runs as per user request. It runs on the platform which is providing by system software**.**
  - Application software high level language is used for their development as they are developed as some specific purpose software.
  - Application software is used by user to perform specific task.
  - Application software are installed according to user's requirements.
  - Application software user can interacts with it as user interface is available in this case.
  - Application software can't run independently. They can't run without the presence of system software.
  - Examples of application software's are word processor, web browser, media player, etc.

42. List two examples of system software and application software.

- **System Software**
  - Compiler
  - Assembler
  - Debugger
  - Driver

- **Application Software**
  - Word processor

- Web browser,
- Media player,

43. Write an Excel IF function that will print remark in cell E10 based on the criterion that if mark is higher than 74, the remark will be “PASSED” or else “FAILED”. Use any cell address to validate the formula.

44. Describe the four mouse pointers in Microsoft Excel.

✚	Used for selecting cells
I	The I-beam which indicates the cursor position when editing a cell entry.
+	The fill handle. Used for copying formula or extending a data series.
→	To select cells on the worksheet. Selects whole row/column when positioned on the number/letter heading label.
↔	At borders of column headings. Drag to widen a column.
↕	At borders of row letters. Drag to increase height of row.

45. Use the table below to answer the questions that follow:

	A	B	C	D	E
1			Khumbo Investment s		
2					
3				5 %	
4					
5	**Item No**	**Selling Price**	**Cost Price**	**Commission**	**Any Profit?**
6	001	MWK4,500.00	MWK 4,000.00		
7	002	MWK500.00	MWK 550.00		
8	003	MWK9,000.00	MWK 1,000.00		
9	004	MWK1,500.00	MWK 2,200.00		
10	005	MWK 5,000.00	MWK 6,000.00		
11					
12	Average				
13	Highest				
14	Lowest				
15					

i. Write a formulae to calculate the average, highest and lowest cost price, in cells **B12**, **B13** and **B14**.
   - In **B12** the formula is **=AVERAGE(C6:C10)**
   - In **B13** the formula is **=MAX(C6:C10)**
   - In **B14** the formula is **=MIN(C6:C10)**

ii. Write the excel formula for calculating the commission on each item using the formula Commission =Selling Price*Commission rate. The Commission rate is found in cell **D3**. Use absolute referencing in your calculation.

iii. Write the IF function to be used to find out if the Company has made any profits. If there is any profit Print **Yes** otherwise **No.**

46. Distinguish the following;

i. Relative reference from absolute references

ii. **$A2** from **A$2** as used in Microsoft Excel
   - **$A2** is an **Absolute Cell Referencing**
   - **A$2** is a **Mixed Cell Referencing**

47. Explain how you can select a noncontagious cell in Microsoft Excel.

- Noncontagious cell can be selected by Press and hold the Ctrl key the use the mouse to select.
- Selecting a noncontagious cell without the use of Ctrl key: Select the cell from where you want, then press Shift+F8, you get a message from the status bar and start selecting cells.

48. Explain how you would make text fit within a cell without increasing the cell size.

- **Adjust the Font Size.** To use this method, select the cell, then go to HOME Tab Alignment and click the little square in the lower right corner. In the new window, select Shrink to fit and press the OK button.

49. If a student gets less than 35 marks, they get a repeat. Between 35 and 44, a Supplementary is given. A pass is awarded to any grade greater than or equal to 45. Write an IF function to help display whether a student has a pass, supplementary or repeat for certain grades entered in an Excel sheet. Also include the AND in your logical operator in your function.

50. Describe the steps you would take to do the following:

i. Add a **Watermark** to a word document
   - Click Page layout tab, in the Page Background group click Watermark command, and in the menu select the Watermark preferred.

ii. Change a document's **Page Background Colour**

- Click Page layout tab, in the Page Background group click Page Color command, in the Theme Colors select the color preferred.

iii. Add a **Picture** to your document

- Click Insert Tab, in the Illustrations Group click Picture command to select picture from picture library and insert it in a document.

iv. Make a text **Superscript**

- Select a text, Click Home Tab, in the Font group select superscript.

51. Use the table below and answer the questions that follow;

	A	B	C	D	E	F	G
1	Giovani Investments						
2							
3							TAX RATE
4							1.50%
5	ITEM No	ITEM	COST PRICE	SELLING PRICE	PROFIT	SALES TAX	
6	001	BANANAS	MWK 160.00	MWK 189.00			
7	002	MANGOES	MWK 150.00	MWK 174.00			
8	003	PEARS	MWK 129.00	MWK 150.00			
9	004	APRICOTS	MWK 123.00	MWK 145.00			
10							
11	LOWEST						
12	HIGHEST						
13	AVERAGE						
14	COUNT						
15							
16							

Write formulae to calculate:

i. The lowest selling price in cell B11
   =MIN(D6:D9)
ii. The highest selling price in cell B12
   =MAX(D6:D9)
iii. The average selling price in cell B13
   =AVERAGE(D6:D9)
iv. The number of Items in stock in cell B14
   =COUNT(A6:A9)
v. The profit realized in cell E6
   =D6-C6 Or =(D6-C6)
vi. The amount of tax payable for each item in cell F6. Use absolute cell referencing.

52. List four functions you will found in the Backstage View of the Microsoft Word application

- Save
- Save as
- Print
- Options
- Exit
- Open
- Close
- Help

53. Explain four different types of document views in Microsoft Word.

- Print Layout
- Full Screen Reading
- Web Layout
- Outline
- Draft

54. Explain four different Workbook Views in Microsoft Excel.

- Normal
- Page Layout
- Page Break Preview
- Custom Views
- Full Screen

55. Explain four different Views in Microsoft Access.

- Datasheet View
- Design View

51. Explain the following three command buttons below:

- Cover Page – Used to insert a fully formatted cover page. You will fill in the title, author, date and other information.
- Blank Page – Used to insert a new blank page at the cursor position.
- Page Break **(Ctrl+Return)** – Start the next page at the current position.

52. Explain the meaning of the following shortcuts or Combination of keys on the keyboard when using Microsoft word

- **Ctrl+A** – Used to Select all texts in a document
- **Ctrl+V** – Used to Paste a text on a document
- **Ctrl+S** – Used to Save the document
